## 2024\_28\_III\_OOPS Using Java Lab

### 2028\_REC\_OOPS using Java\_Week 10\_Q1

Attempt : 1  
Total Mark : 10  
Marks Obtained : 10

#### Section 1 : COD

##### 1. Problem Statement

A city traffic management system needs to track vehicles entering a toll booth. Each vehicle is uniquely identified by its registration number. The system should allow adding vehicles to a record, ensuring that no duplicate registration numbers exist. The vehicles should be stored in a HashSet, which does not guarantee any specific order.

Your task is to implement a program using a HashSet that allows adding vehicle details and displaying the records.

##### ***Input Format***

The first line of input contains an integer N - the number of vehicles.

The next N lines contain details of each vehicle in the format: "RegNumber

OwnerName VehicleType"

1. RegNumber (String) - A unique registration number (Alphanumeric).
2. OwnerName (String) - The name of the vehicle owner.
3. VehicleType (String, Car, Bike, or Truck) - The type of vehicle.

If a vehicle with the same registration number is already present, ignore the duplicate entry.

### ***Output Format***

The output prints the unique vehicle records in any order (since HashSet does not maintain order).

Output format: "RegNumber OwnerName VehicleType"

Refer to the sample output for formatting specifications.

### ***Sample Test Case***

Input: 5

KA01AB1234 John Car

MH02CD5678 Alice Bike

DL03EF9012 Bob Truck

TN04GH3456 Mike Car

KA01AB1234 John Car

Output: TN04GH3456 Mike Car

KA01AB1234 John Car

MH02CD5678 Alice Bike

DL03EF9012 Bob Truck

### ***Answer***

```
import java.util.*;
class Vehicle {
    String regNumber;
    String ownerName;
    String vehicleType;
    Vehicle(String regNumber, String ownerName, String vehicleType) {
        this.regNumber = regNumber;
        this.ownerName = ownerName;
        this.vehicleType = vehicleType;
    }
}
```

```
}
```

```
@Override
```

```
public boolean equals(Object obj) {
```

```
    if (this == obj) return true;
```

```
    if (obj == null || getClass() != obj.getClass()) return false;
```

```
    Vehicle v = (Vehicle) obj;
```

```
    return regNumber.equals(v.regNumber);
```

```
}
```

```
@Override
```

```
public int hashCode() {
```

```
    return Objects.hash(regNumber);
```

```
}
```

```
@Override
```

```
public String toString() {
```

```
    return regNumber + " " + ownerName + " " + vehicleType;
```

```
}
```

```
}
```

```
public class Main {
```

```
    public static void main(String[] args) {
```

```
        Scanner sc = new Scanner(System.in);
```

```
        int N = sc.nextInt();
```

```
        HashSet<Vehicle> set = new HashSet<>();
```

```
        for (int i = 0; i < N; i++) {
```

```
            String regNumber = sc.next();
```

```
            String ownerName = sc.next();
```

```
            String vehicleType = sc.next();
```

```
            Vehicle v = new Vehicle(regNumber, ownerName, vehicleType);
```

```
            set.add(v);
```

```
        }
```

```
        for (Vehicle v : set) {
```

```
            System.out.print(v + " \n");
```

```
        }
```

```
        sc.close();
```

```
    }
```

```
}
```

**Status :** Correct

**Marks :** 10/10
