Roll no: 240701503 Phone: 9150942326

Branch: REC

Department: CSE - Section 10

Batch: 2028

Degree: B.E - CSE

2024_28_III_OOPS Using Java Lab

2028_REC_OOPS using Java_Week 8_Q1

Attempt : 1
Total Mark : 10
Marks Obtained : 10

Section 1: Coding

1. Problem Statement

Write a program to validate the email address and display suitable exceptions if there is any mistake.

Create 3 custom exception classes as below

DotException At The Rate Exception Domain Exception

A typical email address should have a " . " character, and a "@" character, and also the domain name should be valid. Valid domain names for practice be 'in', 'com', 'net', or 'biz'.

Display Invalid Dot usage, Invalid @ usage, or Invalid Domain message based on email id.

Get the email address from the user, validate the email by checking the

above-mentioned criteria, and print the validity status of the input email address.

Input Format

The first line of input contains the email to be validated.

Output Format

The output prints a Valid email address or an Invalid email address along with the suitable exception

If email ends with . or contains not exactly one . after @, it throws:

DotException: Invalid Dot usage

Invalid email address

If @ appears not exactly once, it throws:

AtTheRateException: Invalid @ usage

Invalid email address

If the part after the last dot is not among accepted domains:

DomainException: Invalid Domain

Invalid email address

If all conditions satisfied then print:

Valid email address

Refer to the sample input and output for format specifications.

```
Sample Test Case
```

```
Input: sample@gmail.com
Output: Valid email address
Answer
// You are using Java
import java.util.Scanner;
class DotException extends Exception {
public DotException(String message) {
    super(message);
}
class AtTheRateException extends Exception {
  public AtTheRateException(String message) {
    super(message);
  }
}
class DomainException extends Exception {
  public DomainException(String message) {
    super(message);
public class Main {
  public static void validateEmail(String email) throws DotException,
AtTheRateException, DomainException {
    if (email.startsWith(".") || email.startsWith("@") || email.endsWith(".") ||
email.endsWith("@")) {
      throw new DotException("Invalid Dot usage");
    int atCount = email.length() - email.replace("@", "").length();
    if (atCount != 1) {
      throw new AtTheRateException("Invalid @ usage");
```

```
int lastDotIndex = email.lastIndexOf('.');
    if (lastDotIndex == -1 || lastDotIndex < email.indexOf('@')) {
      throw new DotException("Invalid Dot usage");
    String domain = email.substring(lastDotIndex + 1);
    if (!(domain.equals("in") || domain.equals("com") || domain.equals("net") ||
domain.equals("biz"))) {
      throw new DomainException("Invalid Domain");
public static void main(String[] args) {
    Scanner scanner = new Scanner(System.in);
    String email = scanner.nextLine();
    try {
      validateEmail(email);
      System.out.println("Valid email address");
    } catch (DotException e) {
      System.out.println("DotException: " + e.getMessage());
      System.out.println("Invalid email address");
    } catch (AtTheRateException e) {
      System.out.println("AtTheRateException: " + e.getMessage());
      System.out.println("Invalid email address");
   } catch (DomainException e) {
      System.out.println("DomainException: " + e.getMessage());
      System.out.println("Invalid email address");
    scanner.close();
```
